

AMU VICE- PRESIDENT FOR CENTRAL AFRICA, CHAIR,
LOCAL ORGANIZING COMMITTEE

It is my great pleasure to welcome the African Mathematical Community as well as the international Mathematical Community to attend the 10th Pan African Congress of Mathematicians PACOM2021 that will take place in Brazzaville (Congo) from 02-07 August 2021.

PACOM is the greatest mathematical event of the African continent that holds every four years since 1970. PACOM2021 is the first PACOM that will be organized in central Africa, the Republic of Congo is then very pleased to host this event under the theme “Mathematics and the challenges of the African development”.

PACOM2021 will cover many activities such as:

1- Satellite conferences: here outstanding researchers from African and beyond will present their research and discuss together.

2-Special session “African Women in Mathematics”: among all the special sessions, there will be a special session of the African Women in Mathematics which is a society of

African women (lecturers, researchers, graduate students) working in mathematics. In this session, they will present their researches, share their ideas and discuss mathematics with others.

I assure you of the highest level of the scientific event.

I Would like here to thank sincerely the African Mathematical Union members for their confidence and for the assistance and support that would be provided at the various stages of the preparation of PACOM 2021

Many more exciting activities will be organized during PACOM2021 and I am very grateful to all those who have accepted our invitation. I look forward to welcoming you in Brazzaville.

Prof. Basile Guy Richard BOSSOTO, AMU-Vice President for Central Africa

Chair of the PACOM 2021 Local Organizing Committee
